**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Oshiyama et al. (US 2004/0115476).

The reference discloses an organic electroluminescent (EL) element comprising an anode, a cathode, and a component layer including a light emission layer. The component layer contains a compound represented by formula 1. See formulae 1, 2 and (d) on page 3, particularly, formulae 2-2 and 2-3 on page 16, HC5, HC7 on page 20, formula 12-41 on page 41 and formulae 14-2, 14-3 and 14-5 on page 52. Also, see the claims having the present core structure. The reference formulae anticipate the claimed compound.

The reference further teaches that the light emission sources include a light source for a photo memory medium, a light source for an electrophotographic copier and a light source for an optical sensor (see section [0329]). Therefore, the reference anticipates the claimed invention.
